

IB Integration and Middleware management

Job Description

Position Title: IB - **Integration & Middleware Manager (Airport)**

Experience: 4-8 Yrs

Location: Navi Mumbai (Onsite)

We are looking for an experienced **IB Manager / Integration & Middleware Specialist** to manage enterprise integration and middleware services in an airport environment. The candidate will be responsible for **administration, support, and delivery of integration services** using **IBM Integration Bus (IIB), IBM App Connect Enterprise (ACE), IBM MQ, IBM DataPower, and IBM API Connect**, primarily on **RedHat Linux (RHEL)** platforms.

This role requires strong hands-on skills in **middleware administration, API integration, troubleshooting, production support, and coordination with multiple teams** to ensure high availability and seamless integration between airport applications.

Key Responsibilities

- Manage and support **IBM Integration Bus (IIB)** and **IBM App Connect Enterprise (ACE)** environments.
- Administer and monitor **Active MQ** for message-based integration across systems.
- Manage API exposure and lifecycle using **IBM API Connect**.
- Support and configure **IBM DataPower Gateway** for security and API routing.
- Deploy, configure, and troubleshoot middleware applications on **RedHat Linux (RHEL/Unix)** servers.
- Handle end-to-end integration support including: Incident management, Root cause analysis (RCA), Performance tuning, Service stability improvements, Coordinate with airport stakeholders and application teams, Requirement Gathering, Implementation and rollout
- Ensure integration services meet **security, availability, and performance standards**.
- Maintain documentation for middleware configurations, deployments, and operational procedures.

Required Skills (Must Have)

- Strong experience in **IBM Integration Bus (IIB)** and/or **IBM App Connect Enterprise (ACE)**
- Experience with **IBM API Connect, IBM DataPower Gateway** and strong knowledge of **Active MQ**
- Hands-on administration in **Linux / RedHat (RHEL/Unix)**
- Good knowledge of REST APIs / SOAP services, Integration patterns, Message flows, ESQL, and adapters

- RedHat Openshift environment exposure, tools like ELK/Graffana/prometheus
-

Candidate Profile

- Strong communication skills and ability to coordinate with multiple teams
- Ability to handle high-pressure production issues and critical incidents
- Good documentation and reporting skills
- Proactive mindset for improving system stability and performance
